SUMMARY

Technical writer and editor with 14 years at one financial tech and fitness tech software company. Wrote API and product documentation using MadCap Flare and Swagger/OpenAPI. Helped set up a knowledge base for internal staff, clients, and outside vendors. Worked with developers, testers, and support teams.

EXPERIENCE

Senior Technical Editor | ABC Fitness Solutions, LLC (formerly ABC Financial Services)

May 2022 – August 2026 — Remote

- Covered the majority of documentation output as the Documentation Team shrank from three to two people.
- Documented API and product releases across 8+ products, working directly in development environments and coordinating closely with developers and QA testers to verify accuracy before publication. Products: Ignite Membership & Operations, DataTrak (the legacy Club Reporting System), Employee Portal, Online Join/MYclubonline, Ignite Engagement, and the Ignite API.
- Authored and maintained Swagger/OpenAPI documentation for the company's API products, covering at least 30 endpoints, many of which developers changed over time to meet client expectations.
- Maintained the company's primary help system in MadCap Flare, integrating and merging content contributions from other technical writers on the team.
- Supplemented MadCap Flare with scripts that catch ghost links and other errors and speed up publishing.
- Established and enforced style guides and documentation templates for both the Documentation team and a separate API team.
- Helped build and maintain a tiered knowledge base for Technical Support and Training teams, maintaining separate internal, client-facing, and third-party vendor content versions to control access appropriately.
- Partnered closely with the Technical Support team to keep content accurate and current, including hardware and networking documents, troubleshooting guides, and other content for Technical Support and Client Implementation, so Client Success Managers and support staff had timely access to needed information.
- Edited and quality-reviewed documentation produced by other technical writers prior to publication.
- Adopted AI-assisted tools (Cursor, Claude, ChatGPT, Atlassian Rovo) into documentation workflows and built automation for recurring documentation tasks.
- Built video tutorials and training content using Camtasia, Captivate, and Snagit to supplement written documentation.
- Used version control across MadCap Central, GitHub, and SVN to manage documentation source and publishing pipelines.

Technical Writer III | ABC Financial Services

August 2012 – May 2022 — Little Rock, Arkansas

- Built foundational experience with the company's documentation systems and processes over a decade, including the core MadCap Flare help project and early API documentation practices that continued in the Senior Technical Editor role.
- Collaborated with subject matter experts and engineering stakeholders to translate complex technical systems into documentation for technical and non-technical audiences alike, including external clients.

Website Coordinator | Arkansas STEM Coalition

March 2012 – October 2012 — Little Rock Metropolitan Area

- Managed web content optimization and documentation for the organization's public-facing site.

SKILLS

API Documentation: Swagger/OpenAPI, REST APIs, Postman, 3scale

Documentation and Authoring: MadCap Flare, MadCap Central, Structured Single-Sourcing, Knowledge Base Architecture, Style Guide and Template Development, Publishing Scripts (Link and Error Checking), Markdown

Tools and Platforms: Jira, Confluence, Zendesk, ServiceNow, GitHub, SVN

Video and Visual Documentation: Camtasia, Adobe Captivate, Snagit

AI-Assisted Workflows: Cursor, Claude, ChatGPT, Atlassian Rovo
